inseego connect™

Deployment, remote management and monitoring simplified

Inseego Connect

Inseego Connect is a multi-tiered configuration and centralized device management platform. Inseego Connect gives enterprise IT managers and small businesses a powerful tool to seamlessly manage their deployed devices without having to be on-premises.

View & Configure Device Inventory

Remotely configure device settings, centralize device information, and pinpoint asset location.

Predict Data Usage

Set data usage thresholds, alerts, and notifications to avoid overage fees. Monitor data usage on pooled data plans.

Monitor Health & Performance

Analyze key health metrics like signal strength and temperature readings. Troubleshoot inconsistent connections and generate critical alerts.

Analytics & Dashboards

Supervise your deployment with informative dashboards and identify rogue users who are consuming excessive data.

GPS-Based Location Services

Track current and historical device location. Find lost equipment and receive alerts of theft.

Mobile Support

Monitor and manage your devices while on-the-go. Support for professional and self installation of Inseego 5G devices.
